

Pipe-Seal-End®

Internal Pipe Seals

Quick. Cost-Effective. Permanent.

The Pipe-Seal-End® application of the liner end seal does not depend on the liner thickness. Pipe-Seal-End also forms a durable packing between the liner surface and the old pipe, even when ground water is pressing.

General Description

Available Standard Dimensions: 8" - 24"

Pipe-Seal-End is part of the family of the Pipe-Robo-Tec internal sealing system. It is a mechanical system designed to eliminate two issues after a CIPP liner is installed-infiltration between liner and host pipe, and liner damage caused by cleaning equipment.

Material Specs

- Suitable Pipe Systems: Service water, wastewater, salt water, potable water
- Rubber Quality: EPDM
- Stainless Steel Quality: 1.4404 AISI 316 L; 1.4571 AISI 316 Ti

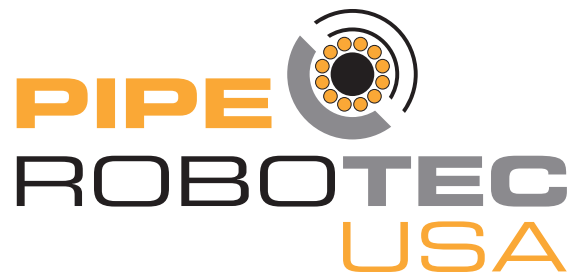

The only difference between Pipe-Seal-End and Pipe-Seal-Fix® / Pipe-Seal-Flex® is the length:

- 8" - 16" diameter: 9.84" in length
- 18" - 32" diameter: 11.8" in length

Applications

Pipe Seal End is an excellent solution for the following applications:

- Liner System Seal:
Creates seal between pipe section rehabilitated with a liner system and the old pipe
- Shaft / Manhole Connection Seal:
Provides pressure-resistant end seal between shaft, structure, old pipe and liner system

Supports Wide Range of Pipe Materials

- RCP
- Non-RCP
- Clay
- Ductile Iron
- GRP
- PVC
- HDPE
